

Academic Performance

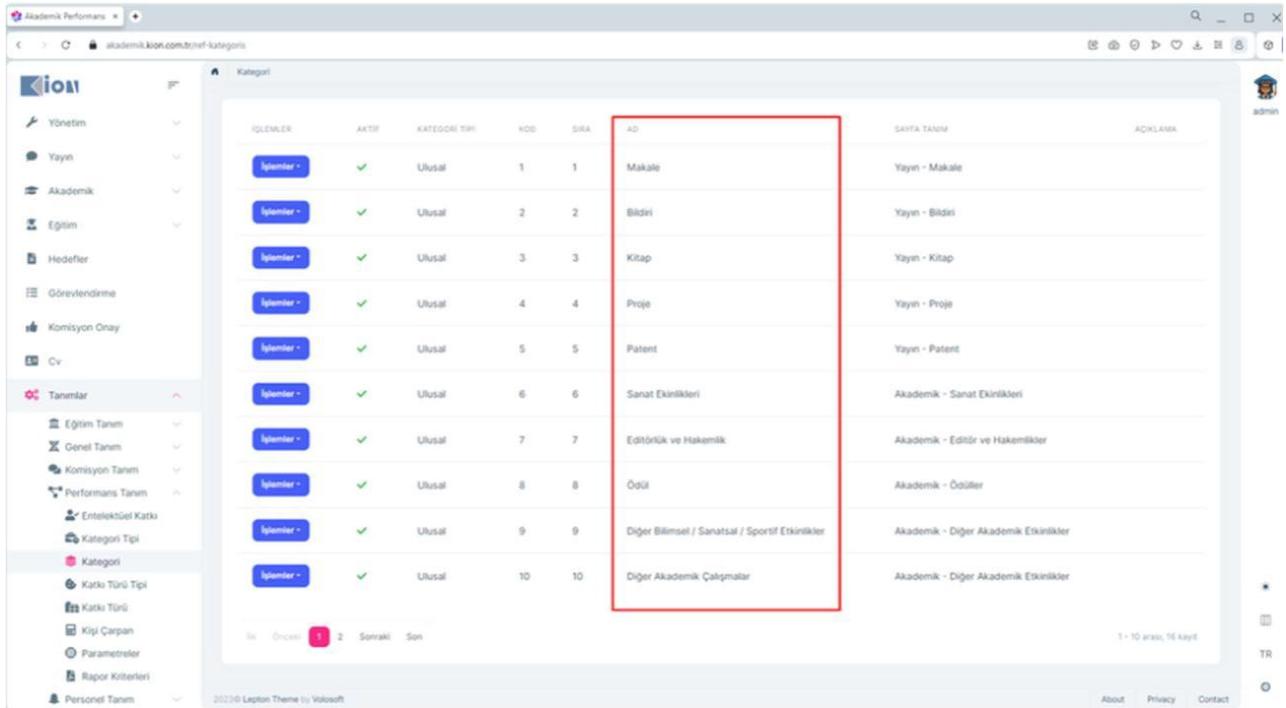

“admin” Logged in with the user.

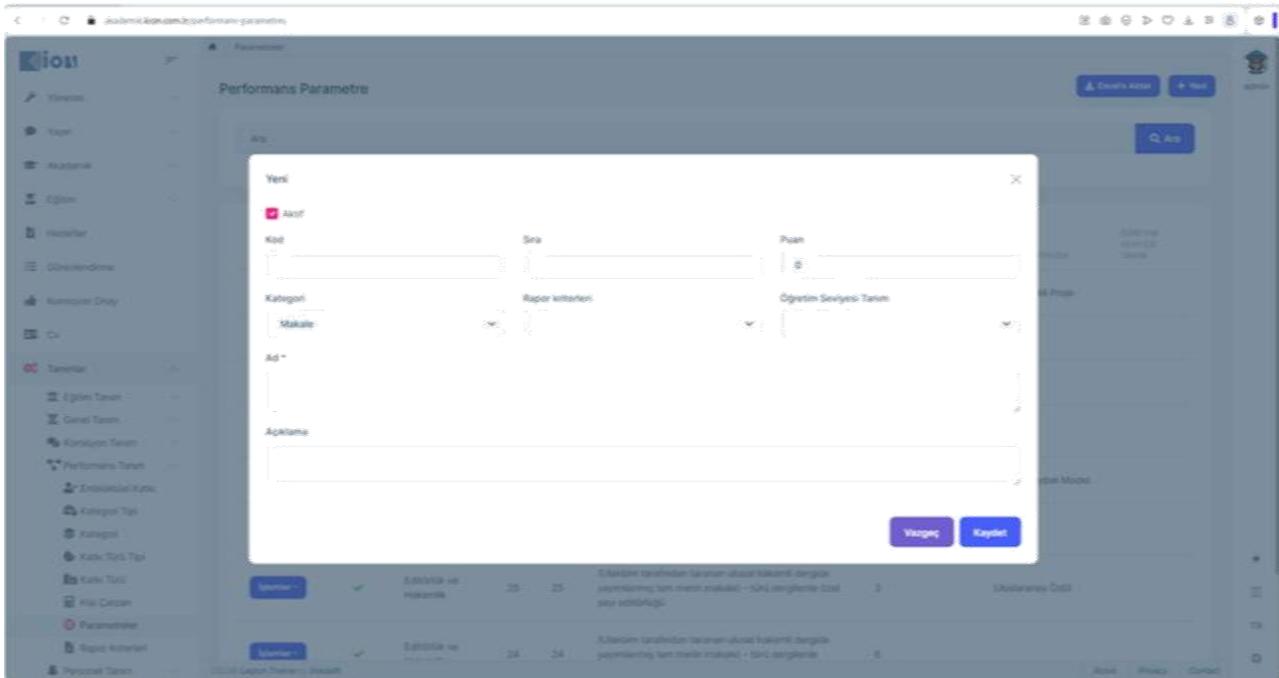

All parameters related to Academic Performance are defined under the definitions menu.

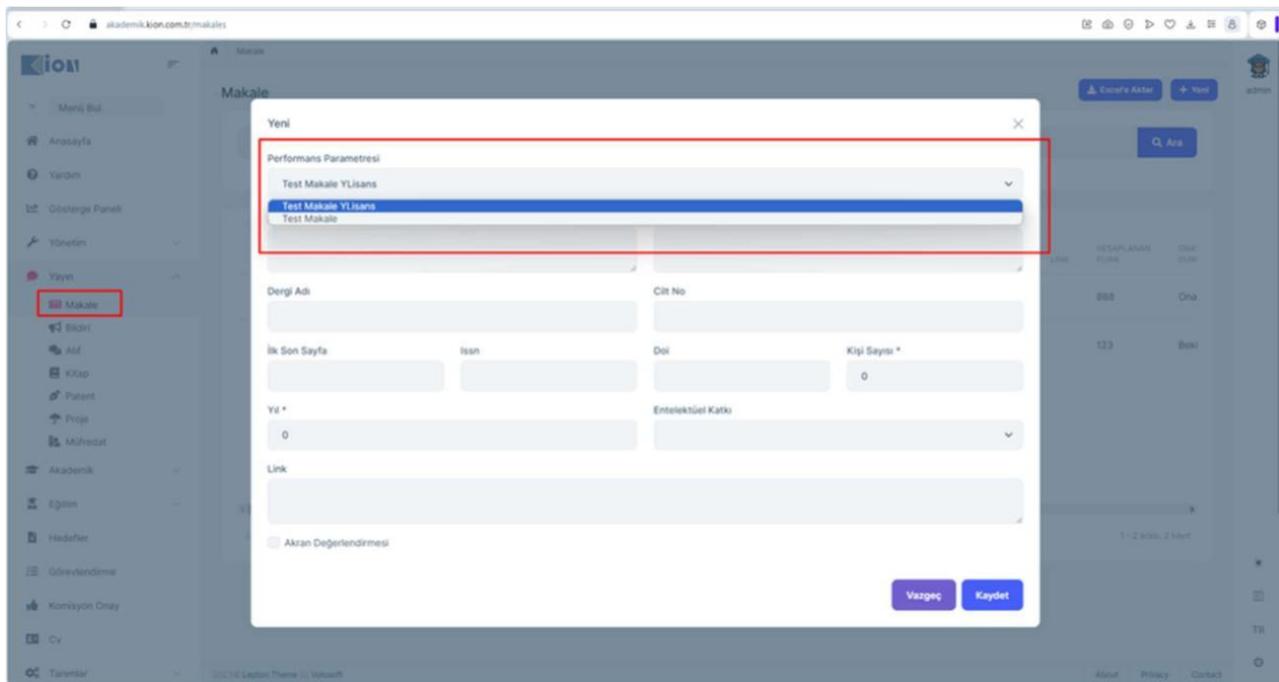

First, Performans Definition → Category Type under Category Type Defined. This type of category categorizes academic performance as National, International, Other, etc.

Performance Description → Under the category, there are categories of academic performance. Articles, papers, books, etc. are all performance categories.

Performance Description → Performance Parameter is defined under Parameters. After these parameters are defined, these performance parameters are reflected on the Academic, Education, Assignment pages in the left menu.

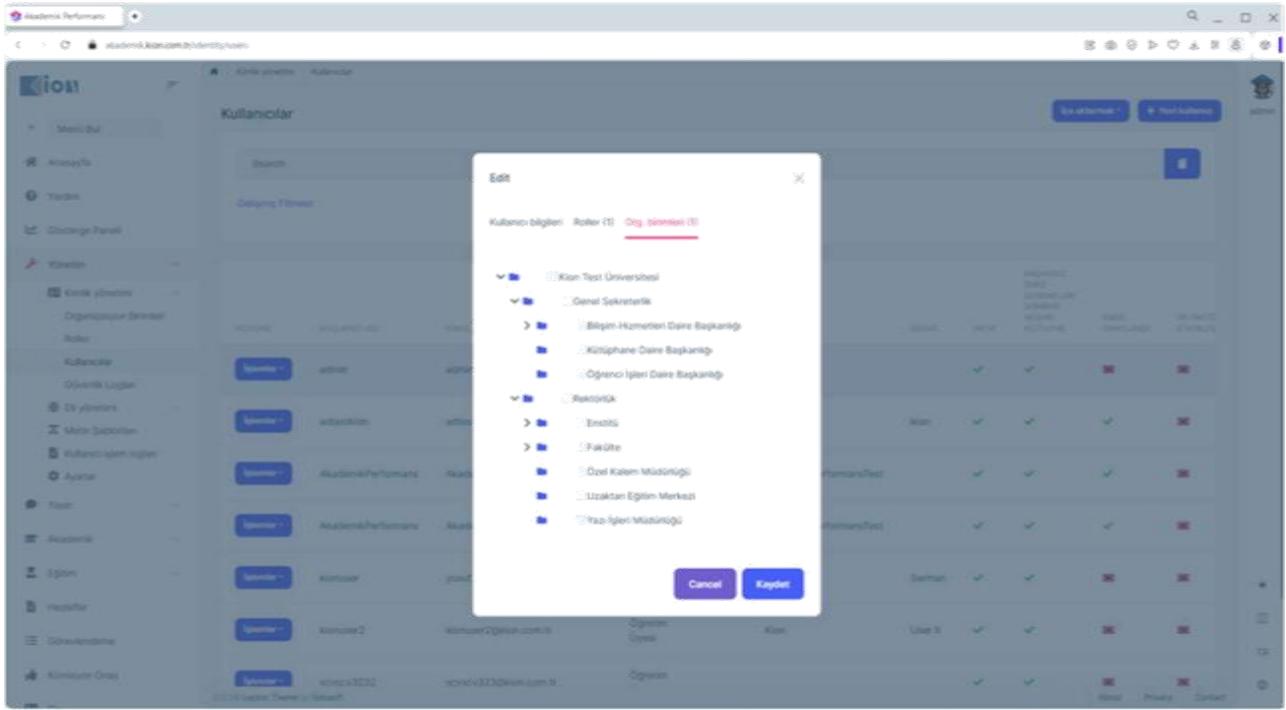

Sample Teacher login to the system and publish→ When you want to add a new article through the article, you will be able to see the Performance Parameters filtered by Page Recognition. S/He will be able to add his/her own performance from here.

Performance Definition → In the Page Definition field on the Category page, it is specified on which page the Performance Parameter will be defined. In this way, instead of having to choose among all performance parameters, performance parameters are selected according to the Page Recognition defined under the Category.

Öğretim	✓	10	Akademik - Öğüller	

Under the Training Description, there are definitions related to the Training menu. Semester, Teaching Level, Exam Level, etc. It can be increased according to demand.

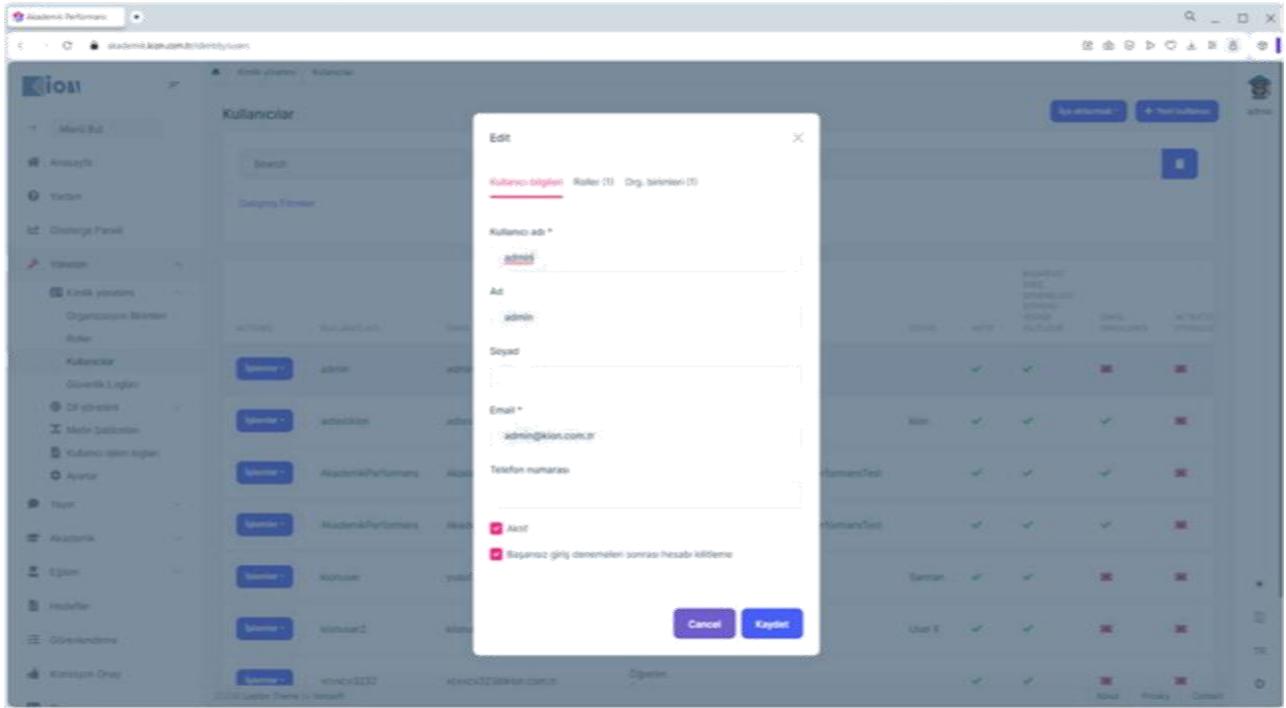

The definitions of University, Faculty, Department have been nullified as a requirement and will be removed from the project.

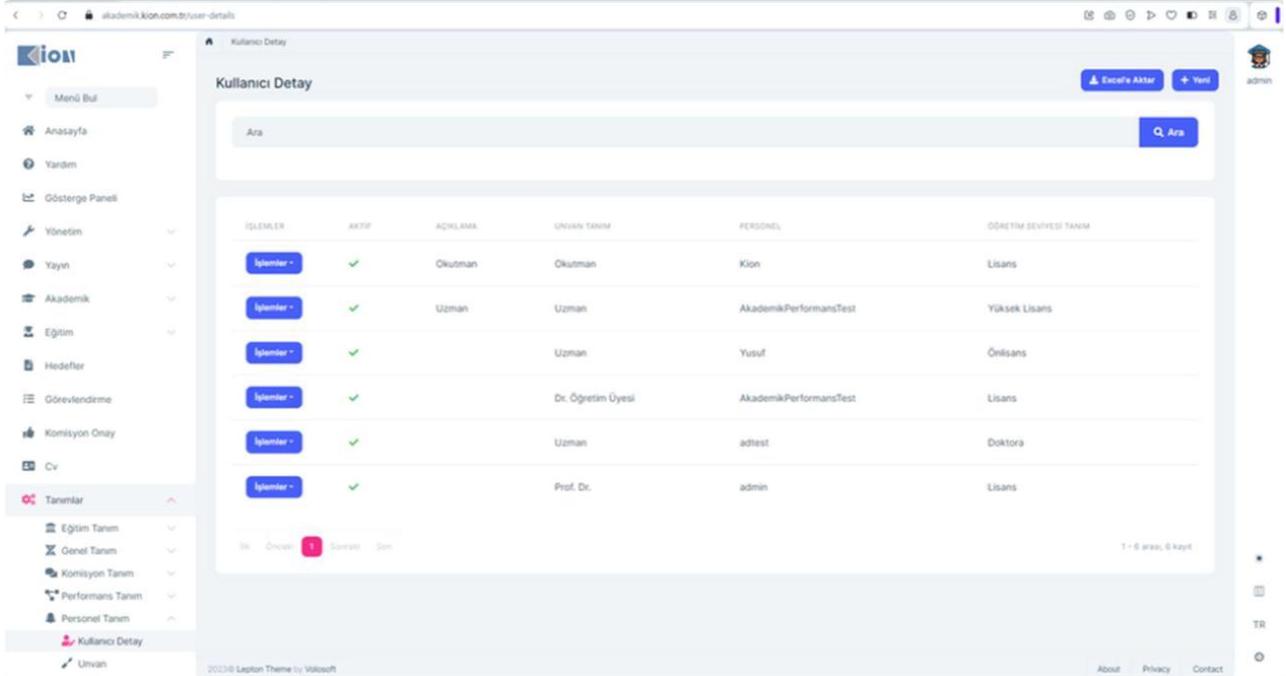

The unit structure must be defined.

User roles can be assigned through Edit Processes → from the Users page.

Through these processes, the user can update other information

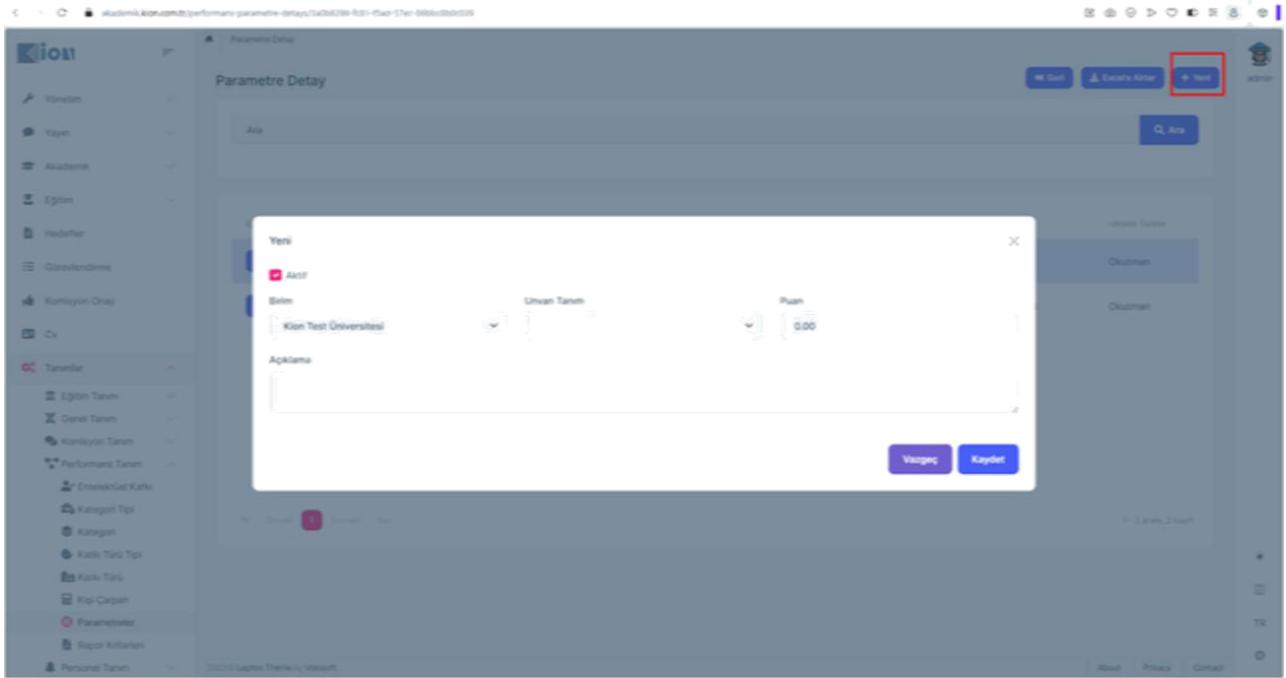

If the user needs to be given additional features, the Personnel Description → must be defined on the User Detail page. These features are required for the Performance Parameter as a Title, Definition and Teaching Level Definition.

İşlemler	✓	Hakemli bir konferansta sunulmuş basılmamış bildiri	3		İnsan ve Toplum Bilimleri Fakültesi	Okutman

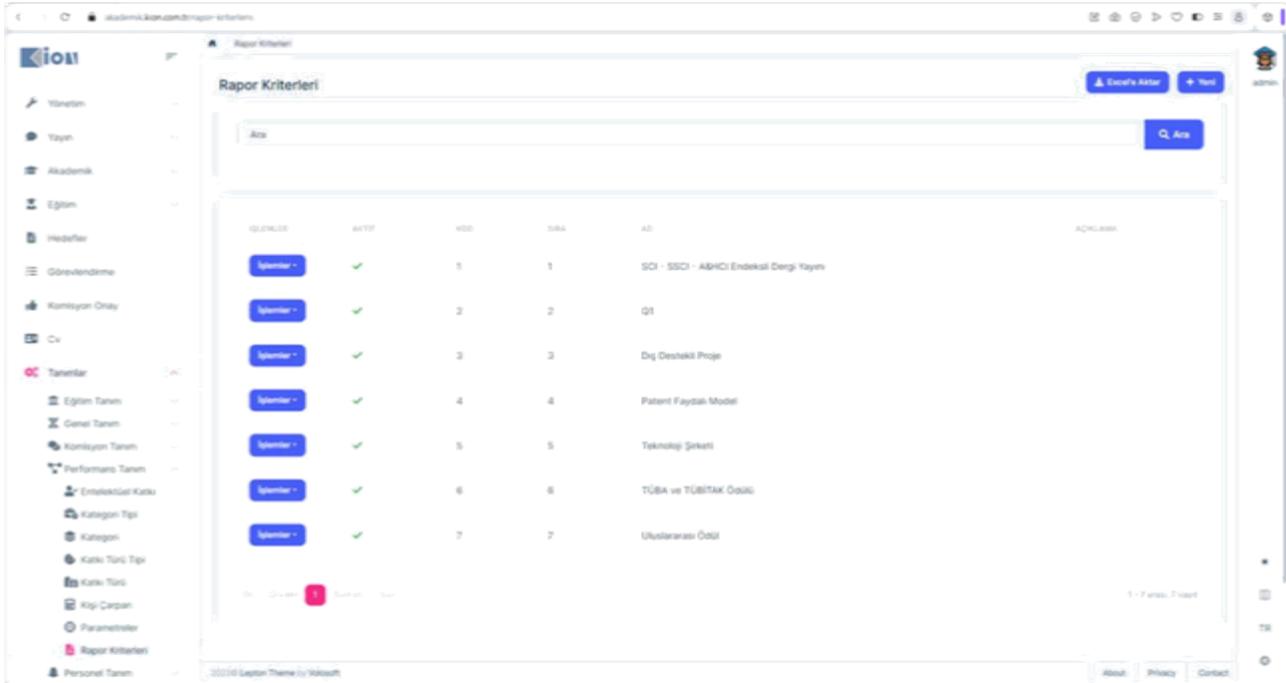

The performance parameter is the detail page. Unit and Title can be multiplexed according to definition.

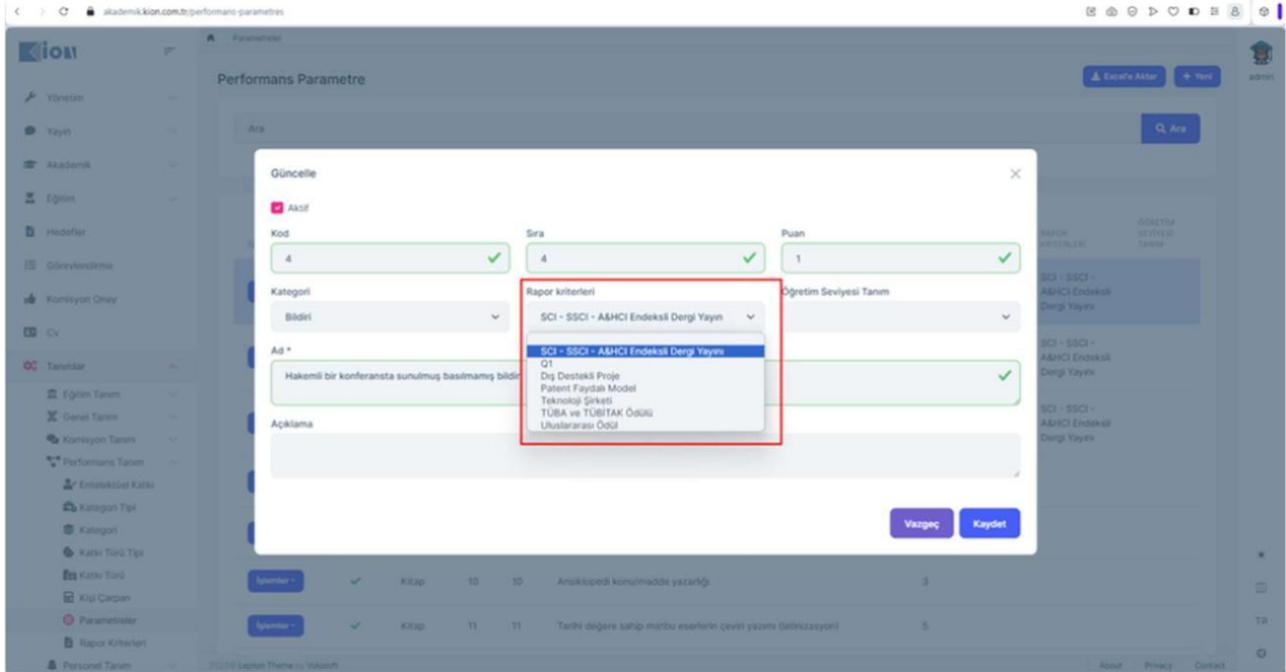

From the Parametre Detay page Through the new button, relevant Performance parameter variants can be produced in which Unit, which Title will have how many points. While calculating, the system calculates by looking at the user's unit, then the title, and then the performance parameter sub-definition, if any.

Performance definition → On the Person Multiplier page, the definition of which performance parameter will be the multiplier coefficient according to the number of people is defined. Here, the Multiplier field expresses how many times the whole score or sub-parameter of the system will be multiplied. Since all of these definitions will vary according to the institution, they are defined as parameters from this page. If the user tries to enter data from the number of people he has not defined, the system will give a "person multiplier not found" error.

The Performance Definition → Report Criteria page is the page where the definitions of the report titles requested by the Gendarmerie are made. Performance parameters were requested to be grouped in these reports.

In Performance Parameters, whichever report the parameter is relevant to is selected from the Report Criteria field and associated. When receiving a report, it is possible to report which operations have been performed in the relevant performance parameter in that report title.

On the Commission Confirmation page under the main menu, the transactions made by the users are listed according to the performance parameter. Here, the commission can check the transaction made and approve, reject or re-edit the transaction through the Transactions -> Approval Transactions of the relevant performance parameter, depending on whether it is valid or not.

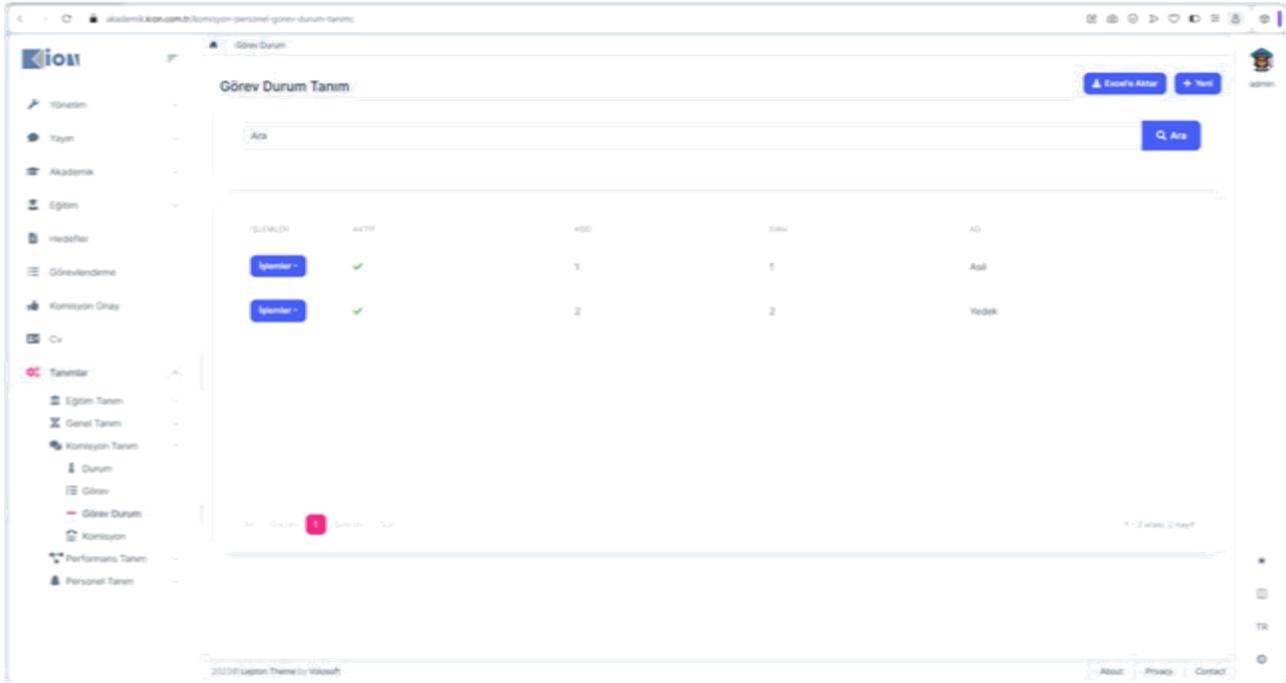

Definitions → Commission definitions are made under the Commission Definition menu. The name of the commission is defined on the commission page.

Commission Tasks are defined from the task page.

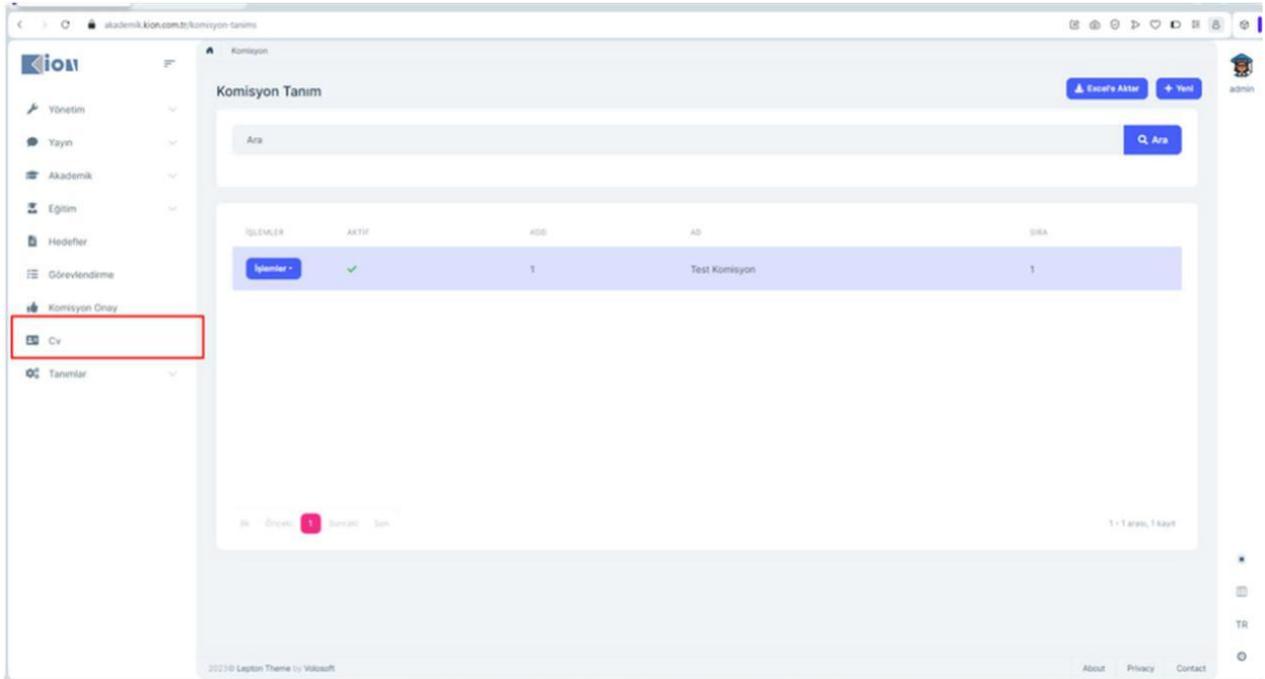

Task statuses are defined on the Task status page.

When defining the commission, it is selected in which unit the commission will be authorized. For example, if Kion Test University, is chosen, this means that the commission will be authorized in all units.

In the personnel section, information is defined which members the Commission will consist of and what the duties of the members and the status of their duties will be.
